Single- and three-phase switched-mode power supply units

NEW

The new switch-mode power supply units of the PROeco series fit optimally in machine construction applications where space, ease of use and efficiency are top priorities. Direct parallel operation, a status relay and adjustable output voltage are basic features required for most every application. A visual display indicates the upper load limit from 90% and makes servicing and integrating the PROeco power supplies particularly easy. With an extremely low depth profile of only 100 mm, the supplies are ideal for use in the smallest of spaces, such as electrical cabinets and low profile distribution enclosures.

The efficiency levels of up to 93% level is considerably higher than conventional power supplies in this class and, thanks to the associated reduced heat generation, use in small cabinets is easy.

Features:

- Slim design with extremely narrow housing depth of 100 mm
- Wide operating temperature range: $-25^{\circ}\text{C} \dots +70^{\circ}\text{C}$
- The output voltage can be precisely adjusted via a potentiometer on supply front
- Remote monitoring via integrated status relay
- Three-colored LED indicators for simple error detection
- Advanced visual warning indication at 90% of rated output current
- High efficiency of up to 93% on selected models
- International approvals: CE, TÜV and cULus
